

Deliberative Process / Ex. 5

Over the past five years, the Brownfield program alone has had 1,676 viable proposals in 1,000 communities and states that were eligible but could not be funded. These projects would have assessed 7,914 sites and cleaned up 465 sites. Because of leveraged money, they would have created approximately 54,680 jobs and would have leveraged over \$10.4 billion of other public and private funding. For every \$1 EPA provides to communities, \$16.11 has been obtained in increased leverage. These type of needs and results can be multiplied at Brownfields and Superfund Sites by implementing the below suggestions:

Deliberative Process / Ex. 5
